

EDUCATION	School of Criminal Justice, Zhongnan University of Economics and Law	China
	<i>LL.B. in Criminal Investigation Science</i>	2021 - 2025
	GPA: 3.87/4.00, 91.26%.	
	Institute of Criminology, University of Cambridge	United Kingdom
	<i>MPhil in Criminology</i>	2025 - 2026
	- Distinction Level, 78%. - Dissertation: How Urban Parks Influence Crime: Evidence from Staggered Park Openings in a Rapidly Developing City.	
	Research Interests: Criminology & Criminal Justice, Empirical Legal Studies, Decision-Making, Human-Computer Interaction	
PUBLICATIONS	1. Luan, X., & Zhang, H. (2024). Procedural application of predictive investigation in the digital intelligence era. <i>Journal of the Criminal Police University of China</i> , (5), 40-47.	
	2. Luan, X., & Zhang, H. (2023). Procedural control of law enforcement initiation in predictive policing scenarios. <i>Journal of the Criminal Police University of China</i> , (6), 120-128.	
CONFERENCE	Leveraging Big Data for Virtual Currency Pyramid Scheme Investigation: Status, Challenges, and Regulatory Responses	
	<i>The Annual Conference of the Hubei Provincial Criminology Society</i>	2023.12
RESEARCH EXPERIENCES	AI Risk Alerts and Police Decision-Making: A Scenario-Based Survey Experiment 2025.XX - present	
	- Pre-registered and developed a mixed 2 x 2 scenario-based survey experiment on how AI risk alerts shape police resource allocation decisions. - Manipulates information density and task type, comparing individual risk alerts and area-hotspot scenarios with randomized evidence cards. - Measures resource allocation, intervention intensity, AI reliance, confidence, reaction time, and information-search behavior across a target sample of 210 participants.	
	The Trojan Horse in the Courtroom: The Impact of Flawed AI Advice on Legal Discretionary Decision-Making Lead Researcher	
	2025.06 - present	
	- Designed and conducted a controlled experiment on how legal practitioners, law students, and laypersons respond to flawed AI-generated legal advice. - Manipulated statutory misapplication and erroneous guiding-case citation errors, measuring explicit adoption, implicit adoption, confidence, and AI trust. - Analyzed 222 participants' responses using human and LLM-assisted coding, GLMMs, and ANOVA, contributing to debates on automation bias and human-in-the-loop legal AI governance.	

EMPIRICAL LEGAL STUDIES	Predicting Street Crime in a Rapidly Urbanizing Context: An Interpretable Machine Learning Approach from Shenzhen 	2025.07 - present
	• Applied a theory-driven interpretable machine learning framework to analyze street-crime patterns in Shenzhen, integrating variables from Broken Windows, Routine Activity, and Social Disorganization theories. • Built XGBoost models with SHAP and partial dependence plots to identify key spatial, demographic, and historical predictors of grid-level crime density. • Combined grid-level prediction with case-level relational analysis to examine how historical crime concentration and offender-context characteristics shape urban crime risk.	
	Detecting the Binding Force of Chinese Guiding Cases Co-author	2024.08 - present
	• This study examines the limited citations of China's Guiding Cases, often reflecting a disconnect between case-based adjudication and the socialist legal tradition, and argues that citations alone fail to capture their true binding. • Introduces large language models (LLMs) to automatically detect and annotate judicial compliance or deviation from guiding cases, providing a scalable and interpretable approach to measuring their practical influence. • Our empirical findings shed fresh light on the evolving interplay between common-law and civil-law traditions in China.	
INTERNSHIPS	Fumens Law Firm Melbourne, Australia	2024.07 - 2024.08
	Zanhuang County Procuratorate Hebei, China	2023.06 - 2023.08
	Guangdong Weilun Law Firm Guangdong, China	2022.07 - 2022.08
HONORS	• Bronze Medal , China International Student Innovation Competition	2024.08
	• Third Prize , MathorCup Global University Mathematical Modeling Challenge	2024.05
	• Third Prize , Annual Conference of the Hubei Provincial Criminology Society	2023.12
SCHOLARSHIP	• Second Class , School Annual Scholarship	2024.12
	• Second Class , School Annual Scholarship	2023.12
	• Second Class , School Annual Scholarship	2022.12
QUANTITATIVE SKILLS	MPhil Courses: Introduction to Quantitative Analysis, Criminological Research Methods. Cambridge Research Methods: Foundations in Applied Statistics Using R, Geographic Information Systems (GIS) Workshop: Spatial Analysis and Mapping, Causality in Statistics. Programming: Python, LLM(Large Language Model), Latex.
